

We curate borderless tech teams  
of all levels and tech stacks

We bridge the gap between an in-house and outsourced team.  
Access the best of both worlds.

## WE ARE HIRING

### Software Engineer

(Python, API integrations, backend, JavaScript/Typescript, frontend, data architecture, AI)

#### Employer/Client

An innovative and dynamic startup based in Australia is developing a venture-assessment-as-a-service SaaS platform for investors, advisors and business owners.

With data and AI at its core, the platform provides unique and predictive insights on hidden intangible assets which are at the core of most business value, and critical to user-driven valuations.

#### Location

Ukraine (Remote)

#### Work experience

5+ years of developer (incl. API integration) experience in a commercial context

#### Type of employment

Part-time (2 days per week for 4-6 months with view of long term appointment)

## What is Ivy Tech?

Ivy Tech is a London-based company that, since 2018, has been bridging the gap between global clients from the US, Europe, UK and Australia and borderless tech talent. Our vibrant, remote talent community drives innovation and embraces diversity.

# We curate borderless tech teams of all levels and tech stacks

We bridge the gap between an in-house and outsourced team. Access the best of both worlds.

## What we do:

- Provide dedicated full-time work in innovative tech companies for the long term with Ivy in the middle as your support structure.
- Access to a global network and opportunity to speak English daily.
- Continuous career development and access to growth opportunities.

## What we don't do:

- Blocking your career growth by constant project switching or sitting "on the bench".
- Unethical or unfair employment practices.

## What you get with us:

- Our developers are empowered to excel, tailoring their professional paths and influencing the evolving tech landscape.
- They get an opportunity to shape their careers and futures alongside industry leaders.

## Who is our client?

Our Australian-based client is hiring a Software Engineer for early-stage SaaS Platform development. The initial goal is to enhance the data available to the user and the product by building API integration pipelines (including client authentication flows) for commonly used business software, for example: Google Workspace, Slack, QuickBooks, Xero, MYOB, Salesforce and HubSpot. Other backend and front-end priorities include automated data processing and data analytics, building or extending data acquisition tools (e.g. proprietary scraping), permissions and user payments, user onboarding processes, improving testing coverage of the existing code, as well as making improvements to the user experience.

## What is our client looking for?

Our client is seeking a developer who can articulate assumptions and find innovative, UX-friendly solutions, efficiently. You are talented at proactive problem solving and will

have a wide range of abilities across backend and software integrations, as an experienced engineer. With several API integrations already under your belt, you will know how to read and interpret supplier documentation, build and test integration code, anticipate and work through roadblocks, until the job is done. You incorporate data security protocols and are adept in implementing top-tier data handling practices. A deep understanding of access controls and user permissions is crucial to ensure that only authorised individuals can interact with and access integrated data. You understand the link between your code, the product and the user, and have the tenacity to question the norm to create high-quality user outcomes. Your collaboration with our existing team shows that you care about shipping dates, and know how to prioritise your time proactively. You are excited to work for an incredible early stage brand that has global ambitions.

## Responsibilities:

- Creative, curious, and driven to get things done: move fast and fixes things
- 5-10 years in software development (Python, JavaScript/Typescript, AWS)
- Experience with common business system API integrations (eg Google, Slack, Accounting software), familiar with reading and actioning API documentation
- Proven ability to write clean, maintainable and well-documented code
- Familiarity with OAuth2 authentication and user consent flows
- Humbly challenges the status quo and leads best practice software/data architecture
- Applied knowledge of data security and data privacy best practices
- Excellent problem-solving skills, attention to quality, ability to focus on detail
- Strong communication and collaboration skills, keeping others in the team informed
- Strong English language skills
- Experience with SaaS platforms and Financial Services - a bonus

We bridge the gap between an in-house and outsourced team.  
Access the best of both worlds.

## Nice to haves:

- Join the existing development team's operating rhythm, proactively taking accountability for assigned, priority Jira tickets and for front- and back-end development tasks
- Develop one-time, secure and user-friendly integrations for API data ingestion from a range of third party software commonly used by the user
- Understand the context: follow guidance provided by the Senior Product Team, while adding useful insights to improve processes and approaches along the way
- Include comprehensive code documentation (docstrings, inline comments) to explain the purpose and functionality of key code segments
- Use security protocols to protect user data
- Implement error handling and provide clear error messages for any issues arising during data retrieval.
- Build and run testing scenarios for existing code
- Review and update code based on feedback provided by senior developers, UX testing and user feedback
- Daily check-ins with our CTO/CDO, and maintain live communications on relevant channels.

## Character attributes:

- You are trustworthy, and you love to be challenged and to challenge the people you work with to think outside the box.
- You hone in on detail, and you are talented in finding solutions fast
- You have a hunger to learn and grow with your peers, as well as help your peers grow.
- You enjoy working with values-driven, agile and professional teams.

## What We Offer:

- Competitive salary based on experience and skills.
- The opportunity to work with a modern technology stack and build innovative products long-term (no bench time, no project switching!). Plenty of opportunities for learning and continued career growth.
- A great values-based company culture valuing general well-being.
- Flexible working: total remote.
- Social package which may include medical insurance.
- Opportunity to speak English daily.
- Corporate events, merchandise, perks, and general well-being.
- We are a company based on the values of
  - Communication
  - Groundedness
  - Productivity
  - Commitment

**Thank you for considering a career with us!**
